District 7 Map.....	L-Ï

Introduction

This report provides information on public road length and vehicle distance of travel in Mississippi. Included are several graphs and tables illustrating information contained in the Planning Division's files as of December 31, 2014. These totals are based upon road distances as determined by distance measurement instruments (DMI). Therefore, they may not agree with other Department publications that utilized "plan measurements," based upon horizontal survey distance. However, due to metric conversions and rounding, calculations may vary slightly between tables.

Since most travel is upon State maintained highways, they receive the majority of user taxes. Figure 1 illustrates road length and distance of travel by maintenance responsibility.

Figure 1

Figure 2 shows how MDOT road length and distance of travel is arranged by functional classification.

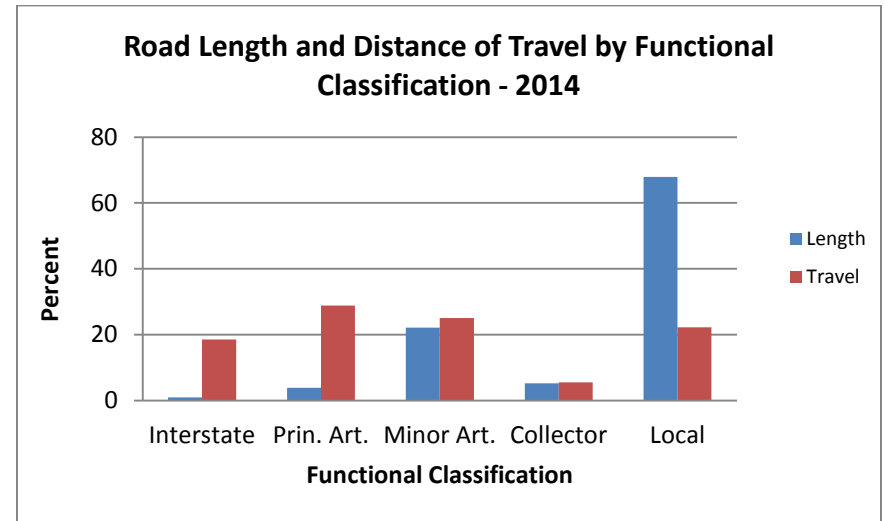

Figure 2

The Designated Section of this publication is to provide, in a single source, a compilation of route designations in the State of Mississippi by either the United States Congress or the Mississippi State Legislature. This compilation is for planning purposes only and is not intended to represent legal descriptions. The applicable laws passed by the legislative bodies designating routes should be consulted in the event there are any doubts about a designation when using this publication.

The legislative bodies can make additions to, or deletions from, the State Designated Highway System. It should, however, be pointed out that the terms "State Designated Highway" and "State Maintained Highway" are not synonymous. In order to become apart of the State Maintained System, a route must be officially designated, meet certain geometric criteria, and be accepted by the

Transportation Commission for maintenance. Routes on the designated system that are not accepted for maintenance by the Commission should be maintained by the local jurisdiction in which the route is located.

Figure 3 summarizes maintenance category by route.

Miles by Route and Maintenance Category - 2014			
Route Category	Maintenance Category		
	MDOT Maintained	County, City, and Other Maintained	Total
Designated Routes			
Interstate	698.779	0.000	698.779
US Numbered	2,524.225	4.243	2,528.468
MS Numbered (Including loops, spurs, & connections)	7,556.733	385.297	7,942.030
Frontage Roads	0.000	0.000	0.000
Subtotal	10,769.901	400.127	11,170.028
Non-Designated			
Frontage Roads	122.296	35.783	158.079
All other routes (Includes Frontage Roads and Natchez Trace)	2.092	64,462.855	64,464.947
Totals:	10,904.125	64,888.178	75,792.303

Figure 3

Figure 4 summarizes the extent of the National Highway System. The National Highway System Designation Act of 1995 was signed by President Clinton on November 28, 1995. It provided for the establishment of an interconnected system of Interstate and principal arterial routes to serve major population centers, international border crossings,

ports, airports, public transportation facilities, and other intermodal transportation facilities.

National Highway System Miles with Intermodal Connections			
National Highway System Route Category	Rural	Urban	Total
Interstate	472.731	226.048	698.779
Other NHS	1,823.339	992.049	2,815.388
NHS Intermodal Connections	57.912	51.299	109.211
Statewide Totals	2,353.982	1,269.396	3,623.378

Figure 4

The National Highway System (NHS) was established by the Department of Transportation (DOT) in cooperation with the States, local officials, and metropolitan planning organizations (MPO).

Figure 5 summarizes the lane length used by the Maintenance Division for Fiscal Year 2014 budgeting purposes only. Lane length is based on plan measurements and does not include bridges. Therefore, it is not comparable with other road length in this publication. Lane length includes the length of all individual lanes of travel (through lanes, turn lanes, on and off ramps, and other auxiliary lanes).

MDOT Maintenance Lane Length Not Including Bridge - 2014	
Maintenance District	Lane Length (Miles)
1	5,503.140
2	5,432.040
Northern Commission District	10,935.180
3	3,774.390
5	5,501.240
Central Commission District	9,275.630
6	5,646.880
7	3,858.380
Southern Commission District	9,505.260
Statewide Total	29,716.070

Figure 5

The total road length remains fairly constant from year to year as seen in Figure 6. The table provides a historical summary of the relationship between non-municipal, municipal, and total statewide length statistics for a five-year period.

Historical Public Road Length 2010-2014						
System	Surface					
		2010	2011	2012	2013	2014
Total Non Municipal	Paved	42,858.736	43,059.939	43,086.989	42,337.272	43,803.277
	Unpaved	20,101.999	19,965.446	19,970.633	19,524.588	18,432.357
	Total	62,960.735	63,025.385	63,057.622	61,861.860	62,235.634
Total Municipal	Paved	11,686.718	11,574.087	11,616.766	12,687.628	13,131.946
	Unpaved	433.025	519.147	506.761	566.627	424.723
	Total	12,119.743	12,093.234	12,123.527	13,254.255	13,556.669
Total Statewide	Paved	54,545.454	54,634.026	54,703.755	55,024.900	56,935.223
	Unpaved	20,535.024	20,484.593	20,477.394	20,091.215	18,857.080
	Total	75,080.478	75,118.619	75,181.149	75,116.115	75,792.303

Figure 6

Routes in this publication are generally grouped into six categories and the following abbreviations are used as route prefixes:

I	Interstate Highway System
US	United States Highway System
MS	Mississippi State Highway System
None	Memorial Highways, Bridges, Scenic Routes Wildflower Routes

In the event that omissions, or other errors, are encountered when using this publication, please inform:

Glossary of Terms

Annual Vehicle Miles of Travel (AVMT) - Total annual traffic on a road segment, expressed as Annual Average Daily Traffic multiplied by the number of days in the year, multiplied by the length of the road segment measured in miles.

Annual Average Daily Traffic (AADT) - The estimate of typical daily traffic on a road segment for all days of the week, Sunday through Saturday, over the period of one year.

Average Daily Traffic (ADT) - The total traffic volume during a given time period (more than a day and less than a year) divided by the number of days in that time period.

Average Saturday Traffic - The total traffic volume for all of the Saturdays during a given time period divided by the number of Saturdays in that time period.

Average Sunday Traffic - The total traffic volume for all of the Sundays during a given time period divided by the number of Sundays in that time period.

Average Weekday Traffic - The total traffic volume for the days Monday through Friday during a given time period divided by the number of days in that time period.

Automatic Traffic Recorder (ATR) - A permanent device that records the continuous passage of vehicles across a given section of roadway by hours of the day, days of the

week or months of the year. Also referred to as Continuous Traffic Recorder.

Commercial Vehicles - Vehicles that are categorized as type 4 through 13 according to the FHWA Vehicle Classifications shown on page B-1.

Design Hourly Volume (DHV) - The hourly traffic volume used in the design of highways, usually represented by the thirtieth highest hourly volume of the future year chosen for design.

Directional Distribution of Traffic - The percent of traffic in the direction of the lane(s) with the highest traffic volume.

Functional Classification (FC) - A process by which streets and highways are grouped into classes or systems according to the character of service they provide. The various classes and their definitions are listed below:

Rural Interstate - Roads designated as part of the Interstate System in rural areas.

Rural Principal Arterial - Consists of a connected rural network of important continuous routes that have trip length and travel density characteristics indicative of substantial statewide or interstate travel.

Rural Minor Arterial - An integrated network providing interstate and intercounty service that links cities, larger

towns, major resort areas, etc. that are capable of attracting long distance travel.

Rural Major Collector - Provides services to any county seat not on an arterial route, larger towns not served by higher systems, and other traffic generators of equivalent importance such as schools, shipping points, county parks, important mining and agricultural areas, etc.

Rural Minor Collector - Collects traffic from local roads and brings all developed areas within a reasonable distance of a collector road, provides service to the remaining smaller communities and links the locally important traffic generators.

Rural Local - Provides access to adjacent land, provides service to smaller communities and carries travel from low population areas to rural collectors.

Urban Interstate - Roads designated as part of the Interstate System in urban areas.

Urban Principal Arterial-Other Freeways and Expressways - Roads which are controlled access, but not designated as part of the Interstate System.

Urban Principal Arterial - Serves the major centers of activity of a metropolitan area, the highest traffic volume corridors, and the longest trip desires. Should carry a high proportion of the total urban area travel.

Urban Minor Arterial - Interconnects with the urban principal arterial system and provides service to trips of moderate length at a somewhat lower level of travel mobility than major arterials.

Urban Collector - Provides both land access service and traffic circulation within residential neighborhoods, commercial and industrial areas, distributing trips from the arterials through the area to the ultimate destination. The collector street also collects traffic from local streets in residential neighborhoods and channels it into the arterial system.

Urban Local - Provides direct access to abutting land and access to the higher classification systems.

High Hour Volumes - The hourly traffic volumes for each Continuous Traffic Recorder site are listed in descending order to find the highest volume, the tenth highest volume, the twentieth highest volume, and so on.

Lane length - The length of all individual lanes of travel (through traffic lanes, turn lanes, on and off ramps, and other auxiliary lanes). Lane length is based on construction plans and does not include bridges (i. e. 1 mile of 4-lane roadway would have a lane length of 4 miles)

MDOT maintained - Public roads maintained by the Mississippi Department of Transportation.

Municipal - Public roads within the corporate limits of a municipality.

Non-commercial - Motorcycles, passenger cars, and light trucks with four tires.

Non-municipal - Public roads not within the corporate limits of a municipality.

Non-state designated - Public roads not designated as state highways by the Mississippi Legislature.

Other maintained - Public roads not maintained by the Mississippi Department of Transportation, but by local governments or other public entities.

Peak Hour - A 60-minute interval that contains the largest volume of traffic for a specific day of “average” day.

Public maintained - Public roads maintained by the Mississippi Department of Transportation and/or local governments or other public entities.

Public Road Length - The length of roadway open to the public regardless of the number of lanes. Public road length does not include on and off ramps. Public road length equates to the distance as if driving along the roadway (i. e. 1 mile of 4-lane roadway would have a public road length of 1 mile).

Rural - Comprises the areas outside the urban boundaries.

State designated - Public roads designated as state highways by the Mississippi Legislature.

Strategic Highway Research Program (SHRP) - A five-year program for pavement and operations research funded by Congress and managed through the program for pavement and operations research funded by Congress and managed through the National Academy of Sciences. One of the four research areas, Long-Term Pavement Performance is planned as a twenty-year program. This program was continued by the Federal Highway Administration in 1992.

Surface - Length tabulations are reflected by two major categories, paved and unpaved.

Urban - Designated by the Bureau of the Census with a 1990 Census population of 5,000 or more.

Vehicle Classifier - A device that counts and classifies vehicles by type and axle configuration.

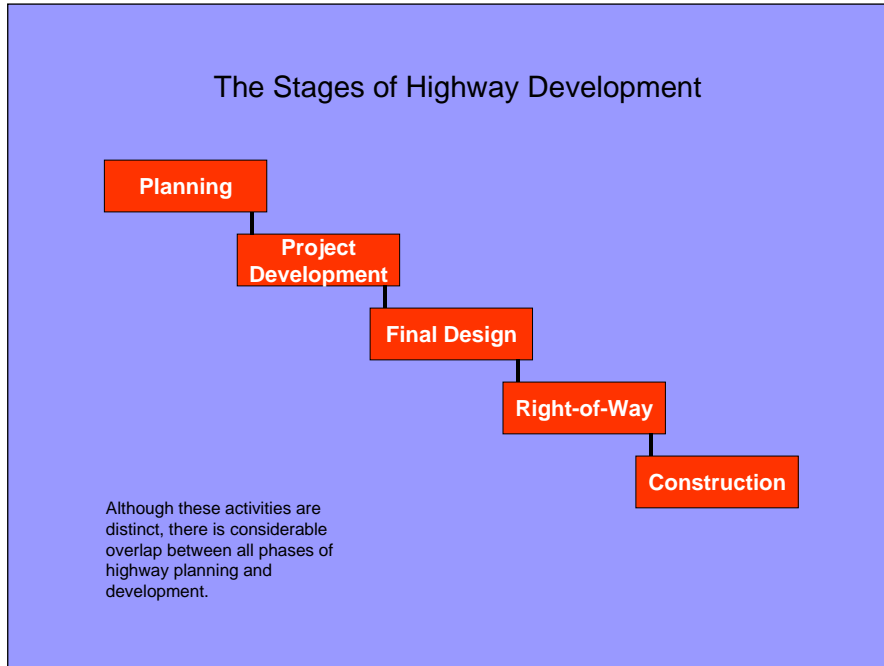

Section A

Highway Planning

Overview of the Highway Planning and Development Process

There are five basic stages in the highway development process that involves planning, project development (preliminary design), final design, right-of-way, and construction. It is during the first three stages that designers and communities working together can have the greatest impact on the final design features of the project. The flexibility during the detailed design phase is limited a great deal by the decisions made at the earlier stages of planning and project development.

The planning stage involves the definition of the need for highway improvement projects and may take place on the State, regional, or local level. The involvement of the public is

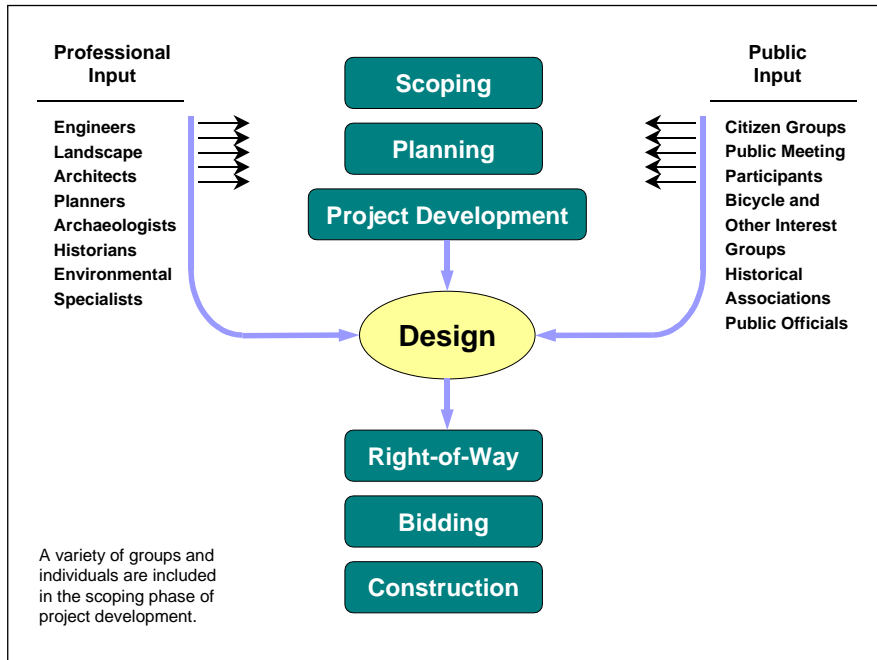

a key part of the decision-making process that occurs during planning.

There are many factors to consider before a project is designed. The potential impact that a proposed facility or improvement may have while the project is still in the conceptual phase is a main consideration. Some of the main factors are shown in the following diagram.

Decisions made at the project development level help to define the major features of the resulting project through the remainder of the design and construction process. Just as in the planning stage, there are many decisions made during the scoping phase of project development, regardless of the level of detail being studied. It is important that the various interested individuals or groups be identified and provided with the opportunity to get involved. A good community impact assessment will also help identify interested parties.

Design is a part of the overall highway development process. Detailed design occurs in the middle of the process, linking the preceding phases of planning and project development with the subsequent phases of right-of-way acquisition, construction, and maintenance.

The project can move into the final design stage after an alternative has been selected. Upon completion of the final design stage, a complete set of plans, specifications, and estimates of quantities of materials is ready for solicitation of construction bids.

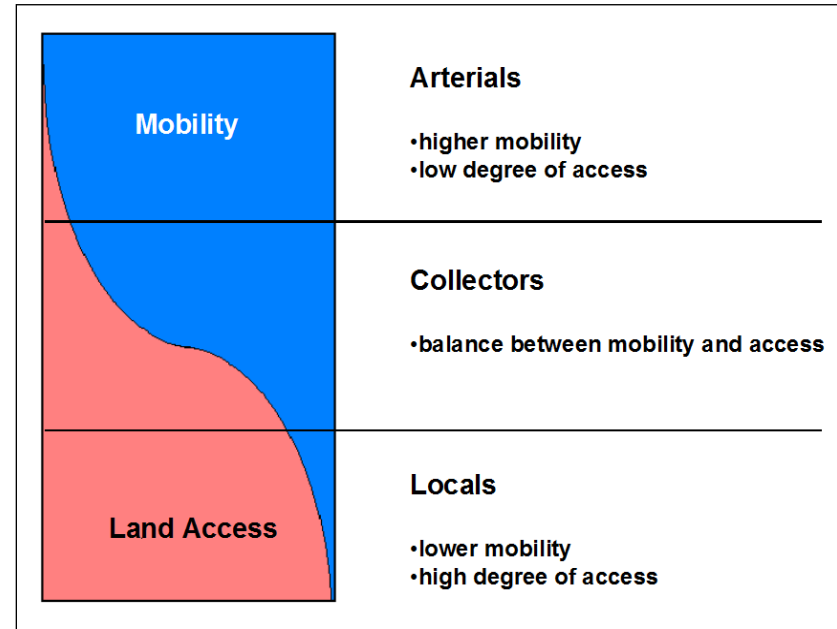

Minor adjustments may be made to the design of a project during the right-of-way and construction stages. After right-of-way is purchased for a project, a construction contractor is selected and construction commences.

The Mississippi Highway System

The Mississippi Highway System consists of slightly over 74 thousand miles of roads and streets. Of this, 64 thousand miles are located in rural areas, and 10 thousand miles are in urban areas. The graph below shows the relationship of total road miles and miles traveled by system in the rural and urban areas.

The correlation between vehicle miles traveled, gasoline prices, and the consumer price index is shown in the graph on the following page. The consumer price index is used as a "fixed weight" to measure the change in the vehicle miles traveled and the gasoline prices.

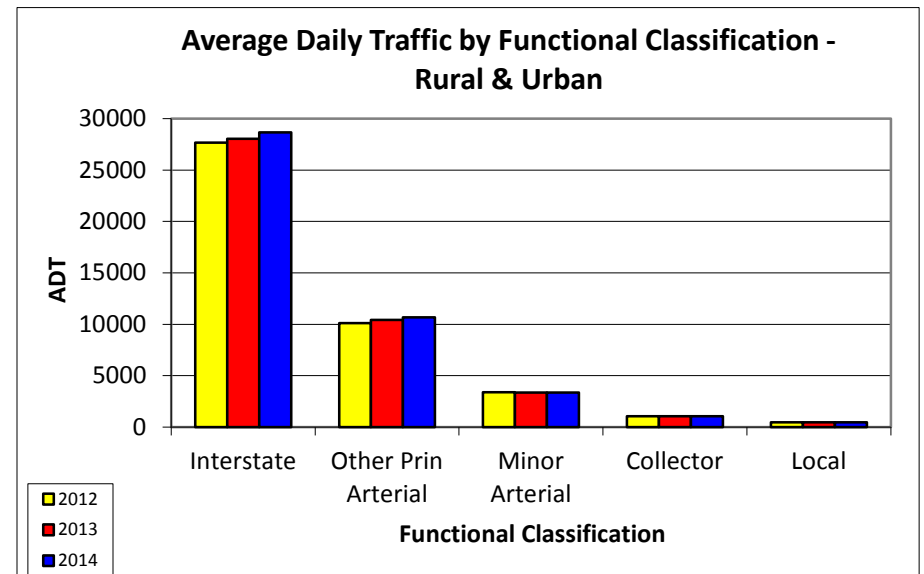

Functional Classification

Functional Classification defines the role that a particular public road plays in serving the flow of trips through a highway network.

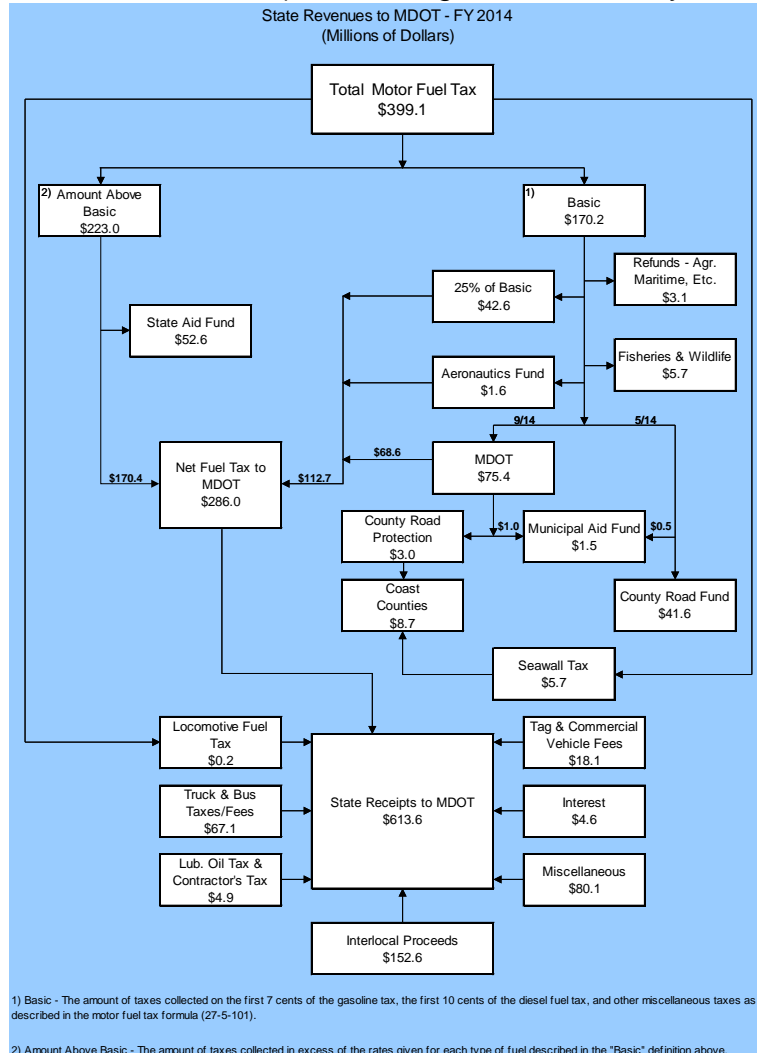

Travelers use a combination of arterial, collector, and local roads for their trips. Each road type has a specific purpose or function. Some provide land access and others provide travel mobility at varying levels. Arterials provide a high level of mobility and a greater degree of access control while local facilities provide a high level of access to adjacent properties but a low level of mobility. Collector roadways provide a balance between mobility and land access. Local roadways serve a land access function to homes, businesses, individual farms and ranches, and other uses.

The next graph illustrates the Average Daily Traffic (ADT) by Functional Classification for three consecutive years.

Road Revenues

The chart below shows the state revenues to the MDOT. The Mississippi Legislature provides state funding through motor fuel taxes and other fees. The state motor fuel tax is a primary funding source for the MDOT. The MDOT received \$286.2 million in funds from state motor fuel taxes (includes locomotive fuel) during fiscal year 2014.

Continuous Traffic Recorders

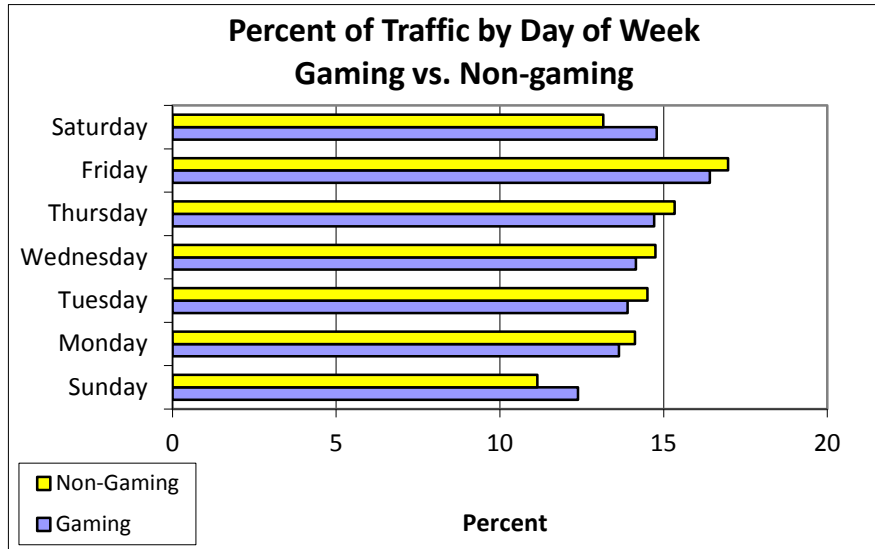

Continuous Traffic Recorders are used to provide continuous traffic count coverage 24 hours a day 365 days a year.

Continuous counts are the backbone of the State's traffic counting program. This data are used to develop seasonal or monthly, day-of-week, and growth factors which are then used to adjust short coverage counts to AADT.

Since Continuous Traffic Recorders are continuously collecting data, information can be gathered regarding traffic patterns in areas throughout the State. Weekday traffic volumes are higher in the urban areas than those volumes in the rural areas. The following graph compares the rural and urban traffic patterns by day of the week.

Typically, the traffic on weekends is higher in gaming areas than in non-gaming areas. The graph below illustrates the comparison of gaming and non-gaming traffic by day of week.

Vehicle Classification

Vehicle classification is defined as the types of vehicles that travel a particular roadway at a specific location and the number of axles on the vehicle. Vehicle classification counts are made at locations selected by statistical analysis to insure accurate distribution. The vehicle classification data are of consider valuable to agencies involved in almost all aspects of transportation planning and engineering.

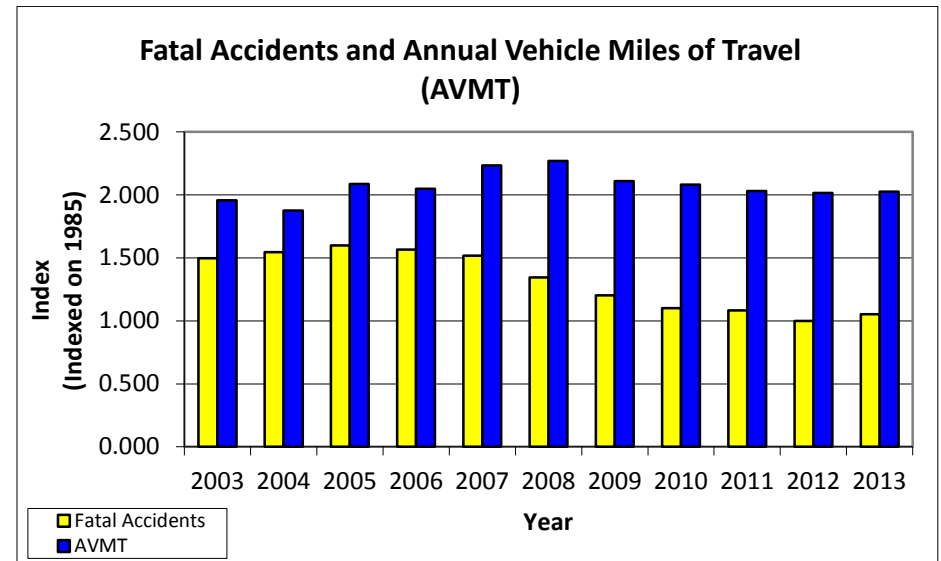

Generally, classification counts are made at locations for a period of 48 hours and record the number of vehicles in each group by hourly increments. Classification data are summarized in order to obtain generalized percentages of commercial and non-commercial vehicles during an average 24-hour period.

These summary data are utilized in planning and design where site specific data are not available.

The graph below shows the breakdown of the number of vehicles by functional classification system and by vehicle classification.

The need for information on truck volumes and freight movements is growing with the recognition of the role that freight mobility plays in the economy of truck volume and operating characteristics on the geometric and structural design of roadways and bridges. The next graph illustrates the relationship between the growth of trucks and cars on the Principal Arterial System in Mississippi.

The last graph shows a comparison among licensed drivers, vehicle registration, and state population.

Motor Vehicles

Numerous types of data are collected and reported by various State agencies. Population, vehicle registration, licensed drivers, and fatal accidents are just a few examples of the data collected by the State.

The following graph shows the vehicle miles of travel in Mississippi compared with the number of fatal accidents for a period of eleven years.

Section B

Vehicle Classification Data

FHWA Vehicle Classifications

1 Motorcycles	2 Passenger Cars	3 Two Axle, 4 Tire Single Units	4 Buses
			
5 Two Axle, 6 Tire Single Units	6 Three Axle Single Units	7 Four or More Axle Single Units	8 Four or Less Axle Single Trailers
			
9 Five Axle Single Trailers	10 Six or More Axle Single Trailers	11 Five or Less Axle Multi-Trailers	
			
12 Six Axle Multi-Trailers	13 Seven or More Axle Multi-Trailers		
			

Vehicle Classification Summary By Area Type and Functional Classification for 2012, 2013, 2014

Functional Classification	Time Period		Motor cycles	Cars	2 axle, 4 tire	Buses	Single Unit			Single Trailer			Multi-Trailer			Total	Pass Vehicles	Commercial

Mississippi Scenic Byways Descriptions by Name

Mississippi Scenic Byways Program

The Mississippi Scenic Byways Program was established in July 2002 through the passage of Senate Bill 2098. This legislation provides the authority of the Mississippi Department of Transportation (MDOT) to administer a Mississippi Scenic Byways Program. To assist the MDOT in the development and administration of the Mississippi Scenic Byways Program, the legislation also provides for the creation of a Scenic Byways Advisory Committee. Through an annual pre-application submittal process, the Mississippi Scenic Byways Advisory Committee selects highways, streets, or roads that qualify as a scenic byway under the Mississippi Scenic Byways Program. If selected, the byway leaders or sponsors may proceed in the development and submission of a corridor management plan (CMP) to the Scenic Byways Advisory Committee. Byway leaders must also hold a public hearing in the area surrounding the byway. After the CMP and final nomination package is approved by the Advisory Committee, byway leaders with the recommendation of the Advisory Committee may submit a bill to the Mississippi Legislature requesting designation as a Mississippi Scenic Byway. The bill must pass both the House and Senate and be signed by the Governor to be named a Mississippi Scenic Byway.

As determined by the National Scenic Byways Program, there are six intrinsic qualities a road can possess in order to be considered for scenic byway designation. These include archaeological, cultural, historic, natural, recreational, and scenic qualities. To be considered for National Scenic Byway designation, a road must possess

at least one of the resources. To receive an All-American Road designation, a road must possess multiple intrinsic qualities that are nationally significant, and it must contain one-of-a-kind features that do not exist elsewhere. The road or highway must also be considered a “destination unto itself.” That is, the road must provide an exceptional traveling experience so recognized by travelers that they would make a drive along the highway a primary reason for their trip.

Mississippi Scenic Byways Descriptions by Name

Name	Designation	Designated By	Description
Grand Gulf-Raymond Scenic Byway	State-designated Byway	Chapter 316, Senate Bill 2455, Laws 2004	Beginning at the Grand Gulf Military Monument on the MS River then runs east along the Back Grand Gulf Rd to Frasier Rd, following east along Frasier Rd to Y-Camp Rd, following east along Y-Camp Rd to Ingleside-Karnac Ferry Rd to U.S. 61, then the route continues 0.5 miles north of U.S. 61, eastward along Willows Rd, then northeastward along Old Port Gibson Rd terminating at the Raymond Military Park at the City of Raymond.
Highway 67 Scenic Byway	State-designated Byway	Chapter 307, Senate Bill 2826, Laws 2007	Beginning at the intersection of Highway 67 and I-10 and travel northerly along Highway 67 to the intersection of Highway 67 and U.S. Highway 49.
Highway 605 Scenic Byway	State-designated Byway	Chapter 307, Senate Bill 2826, Laws 2007	Beginning at the intersection of Highway 605 and U.S. Highway 90 and travel northerly along Highway 605 to the intersection of Highway 605 and Highway 67.
Lower Mississippi Historic Scenic Byway	State-designated Byway	Chapter 544, Senate Bill 2461, Laws 2004	Beginning on U.S. Hwy 61 at the Issaquena/Warren County Line and continuing south through Warren, Claiborne, Jefferson, Adams, and Wilkinson Counties and ending at the Louisiana State Line.
Mississippi Delta Great River Road Scenic Byway	State-designated Byway	Chapter 311, House Bill 1022, Laws 2009	Beginning at the Tennessee state line and travel south on U.S. Hwy 61 to Hwy 161.
